Summary

Machine Learning and Artificial Intelligence enthusiast with a strong foundation in AI, Machine Learning, and Data Science. Skilled in Python, SQL, Linux, Retrieval-Augmented Generation (RAG), LangChain, and Agentic AI concepts, with experience developing intelligent AI-powered applications. Familiar with integrating large language models (LLMs), semantic search, vector databases, and building scalable AI solutions for real-world problem solving. Possess strong problem-solving skills demonstrated through solving 1000+ coding challenges, along with adaptability, teamwork, and critical thinking. Basic knowledge of full-stack web development and an interest in cybersecurity and secure AI application development.

Skills

- Python (Advanced)
- Java (Beginner)
- SQL
- Linux
- Frontend - (HTML , CSS , Java Script)
- Bash Script (Basics)

Education

St Joseph's Institute of Technology, B.Tech in Artificial Intelligence and Data Science Sept 2023 – Sept 2027

- GPA: 7.9
- **Coursework:** Data Structures, Machine Learning, Database Management System, Operating System, Artificial Intelligence

Certifications

- Nptel - Python for Data Science (Score - 78) (Jan - Feb 2025)
- Infosys Springboard - Python
- Nptel - Google Colud Coumputing (Score - 62) (Aug - Oct 2024)
- Netcad - Introduction to CyberSecurity (Aug - 2025)
- Netcad - Networking Basics (Aug - 2025)

Projects

HireWise-AI HireWise-AI

- Designed and Developed an Ai-powered interview assistant in python to evaluate resumes and provide feedback
- Implemented speech-to-text (STT) and text-to-speech (TTS) for a fully interactive voice-based interview experience
- Integrated Mistral API to dynamically generate follow-up questions
- Resume parsing using PyMuPDF and semantic similarity scoring with Sentence-Transformers to evaluate the quality of answers
- Tools Used: Python, tkinter

CivicSense AI CivicSense AI

- Built an AI-powered civic grievance platform that automatically classifies citizen complaints into categories (road, water, sanitation, electricity) using Naive Bayes with TF-IDF text processing.
- Integrated CLIP zero-shot image classification to categorize uploaded complaint images without training custom models.
- Developed a Flask-based backend and web interface for real-time complaint submission, prioritization, and administrative monitoring.
- Tools Used: Python, Flask, Scikit-learn, CLIP, HTML, CSS
